#Categorical data. This is an introduction to pandas categorical data type, including a short comparison with R's factor.. Categoricals are a pandas data type corresponding to categorical variables in statistics. A categorical variable takes on a limited, and usually fixed, number of possible values (categories; levels in R). Examples are gender, social class, blood type, country affiliation ...

Categorical Propositions. Now that we've taken notice of many of the difficulties that can be caused by sloppy use of ordinary language in argumentation, we're ready to begin the more precise study of deductive

reasoning. Here we'll achieve the greater precision by eliminating ambiguous words and phrases from ordinary language and carefully defining those that remain.

Deriving a Model for Categorical Data. Typically, when we have a continuous variable Y (the response variable) and a continuous variable X (the explanatory variable), we assume the relationship $E(Y|X) = \beta_0 + \beta_1 X$. This equation should look familiar to you as it represents the model of a simple linear regression. Here, $E(Y|X)$ is a random variable.
