The dungeon game object generate a procedural layout for your dungeon based on the various configuration paramters. After the layout has been generated, it spawns meshes, lights, blueprints etc, based on the mappings you have defined in the Theme file. This way you can define what meshes needs to be attached to the floors, walls, ceilings, etc

Dungeon Architect User Guide - GitHub Pages

From within the game open the Steam overlay (shift+tab is the default) and hit Controller Configuration from the menu on the left. It may give you the option to import a config from here but probably not. My advice would be to test it with something simple like binding the d-pad buttons only, switching back to the game, and seeing if that worked.
