BRAZILFILMFESTIVAL.INFO Ebook and Manual Reference

Gastroparesis is a chronic disorder that affects a significant subset of the population. Ordinarily, strong muscular contractions move food through the digestive tract. In gastroparesis, this mechanism is disrupted, and undigested food stays in the abdomen for a long time and makes a person feel nauseous with the urge to vomit.

A New Approach to Managing Gastroparesis

Differences Between Gastroparesis and GERD. GERD is chronic acid reflux caused by a weakness in the lower esophageal sphincter (LES), the valve the separates the esophagus and the stomach. Gastroparesis, in contrast, often develops after an injury to the vagus nerve, which is responsible for stimulating contractions in the stomach and intestines.

Do I Have Gastroparesis or GERD?

Diabetes is the most common known cause of gastroparesis. It can damage nerves -- including the vagus nerve, which regulates your digestive system -- and certain cells in your stomach. Other causes...

Gastroparesis Causes, Symptoms, Diagnosis, and Treatment

Gastroparesis is a chronic motility disorder affecting the stomach and duodenum and characterized by delayed gastric emptying in the absence of mechanical obstruction. Patients with gastroparesis complain of bloating, nausea, vomiting, pain and heartburn. Gastroparesis may cause acid reflux since gastric emptying is impaired.
