Modern operating rooms which meet current air standards in the United States should be virtually free of particles larger than 0.5mm when no people are in the room. To achieve this, ORs should be equipped with positive-pressure systems to ensure that air travels from ORs to adjacent areas, thus minimizing inflow of air to the room.

The Operating Room - ISID

The temperature in the operating room By AORN standards, the operating room temperature is normally kept between 68 0 and 75 0. 2 This can vary depending on the type of surgery being performed. For example, during an open-heart procedure, the surgeon can request to have the temperature dropped down to 63 0.
